How would you like to be alerted if a patient booked an appointment

10 responses

If you have already used an interface (mobile computer), that integrate with a directory interface for physicians?if yes, for an example ,it has the patient info, bio, calendar ,patients referrals and etc. what other features would you like for it to include ?

9 responses

Nothing. Most of these programs already have the important info you need right off the back in order to initiate the visit at that time.

Patient medical history

Past labs, imaging, prior appointments with attendance record

Messenger would be a great feature, payment portal, cloud for patients to uploads documents

Patient info, pmh, current meds

on the PC software I use I have all patients health related information that was provided to the practice and for the multiple consultation. patient info, bio, previous and future appts, patients documents, medication, bloods and other results and more. What it doesnt have and I think it could be useful is a way to track our individual activity or to have a list of patients that we want to track or to keep an eye on. At least not visual and not intuitively. we may task ourselves to review later, but it may be lost in pool of other
